\_\_\_\_\_**Shipping Instructions**

The following are instructions for shipping samples to Panomics.

Samples must be shipped in a plastic vial and appropriately labeled with a unique identifier. The plastic vials containing the samples can be placed in a small box, but the vials or box must be placed into a sealable bag. Each shipping ice box should contain at least 5 kg of dry ice per box. The box will need to be appropriately labeled. Because these are clinical specimens (and not infectious specimens), the official requirements state that 3 labels be placed on one side only of each box:

The clinical specimens label

The dry ice hazard label (#9 at the bottom)

The Carbon dioxide, solid label, where you must list the amount (in kg.) of dry ice for each box

**Shipping Address** Please send the samples to the following location

Brendan Yee

Panomics-Procarta Service

6519 Dumbarton Circle

Fremont CA 94555
